

The functional networks

The 16 Schaefer networks present in the 100-region atlas: where each sits on the cortex, and how they interconnect.

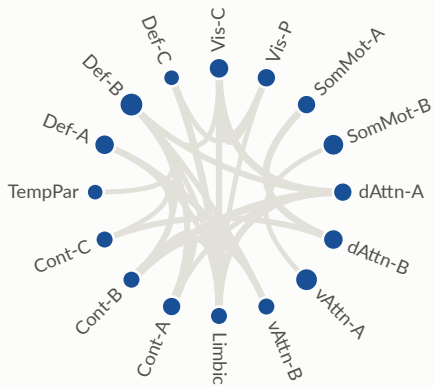

A Each network on the cortex

canonical Yeo order; regions of one network in colour against the rest of the cortex in grey

B Connectivity between networks

the 26 strongest between-network connections, chord width by mean streamline count; node size by regions

strongest pairs: Cont-A–Cont-B 547 · dAttn-A–Cont-B 396 · Limbic–Def-C 376

Sixteen categories cannot be given sixteen colourblind-safe colours, so networks are faceted in A and left uncoloured in B.
